

## ***Make your MCI Myrias system even more useful!***

### ***MCI Myrias enhancements add practical features at low cost***

**MCI Myrias** already helps you to monitor and control your production processes to save time, trouble and money - and helps to demonstrate compliance, 'due diligence' and other legal obligations.

If you want to make your existing **MCI Myrias** installation even more useful, take a look at these low-cost enhancements. Each of them serves up clear opportunities for reduced processing costs, improved quality or more demonstrable compliance in your manufacturing operation.

What's more, they permit **MCI Myrias** to be customised for your own special circumstances, using words and phrases that will be easily understood by your own Operators. User-friendly prompting messages guide staff through simple selection or data entry routines, with plain-language warnings when things go wrong.

#### Line Entry

Records Line or Filler identity (Number or Name) against recorded results together with Product Name/Article Code. Each weigh-station so equipped can take over the work of another in case of breakdown.

#### Reminder

Directs and controls the Operator to specific check procedures at Manager-defined intervals. Allows limited delay where it can be permitted.

#### Task Advisor

Displays Management-editable text messages to the Operator at assigned intervals or activity points. Permits rapid message changes when needed.

#### Tags

Organises Products into groups for rapid database editing of those with like properties e.g. nominal contents; cans per case; alcohol spirit strength

#### Encoded Data Recorder

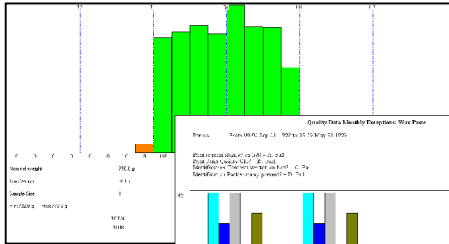

Allows connection of encoded data readers (with suitable serial output) through a **MCI Myrias** data port e.g. bar code, magnetic stripe, RF tags, biometric readers. Saves time and errors over keyboard entry.

#### Head Check

Analyses the performance of each filling head or depositor in a multi-head or multi-depositor production line to reduce filling variability.

SCREEN DISPLAYS AND PRINTED REPORTS

Extensive use of colour graphics | Easily understood reports

Raw data recording, summary reports, exception reports and filtered reports are available in graph and table formats

On-screen alarm and warning messages alert Operators and Managers to non-compliant process conditions

System access is protected by up to five levels of password security

Links to MRP / ERP systems

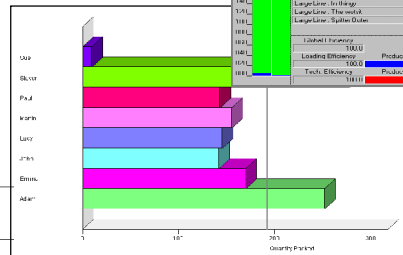

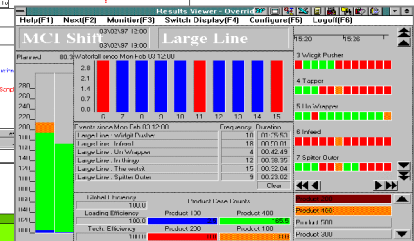

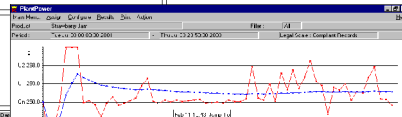

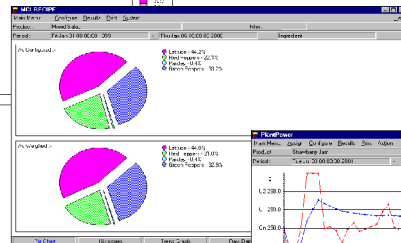

All records time- and date-stamped for precision

Modular software for economic system-building; buy what you need and when your budget allows

Records acceptable for Trading Standards, BRC and other UK and EC legal/regulatory requirements

All reports can be printed and exported to third-party systems

Real-time reports
