

When does one defect become one too many?

MCI Myrias Event & Defect software keeps you up-to-date about overall defect levels in your Products

MCI Myrias Event & Defect software records your routine Product quality checks and can tell you immediately whether you're comfortably in control, edging towards a problem or seriously adrift from Company quality standards!

MCI Myrias prompts the Operator to perform the checks and tests that you configure and requests confirmation that they have been carried out. It also prompts for data about product or process defects that the tests have shown up. If Events and Defects is linked to the Quarantine module, **MCI Myrias** automatically compares the Operator entries to your specified AQL levels and warns when quality is deteriorating.

- ◆ Runs on standard **MCI Myrias** systems for Product and Filling Line control
- ◆ Manager-edited lists for event and defect descriptions
- ◆ Up to 100 event or defect descriptions per list
- ◆ Easy copy routine to duplicate and edit lists
- ◆ Full accountability and traceability data for every check
- ◆ Colour bar chart analysis including nil defects

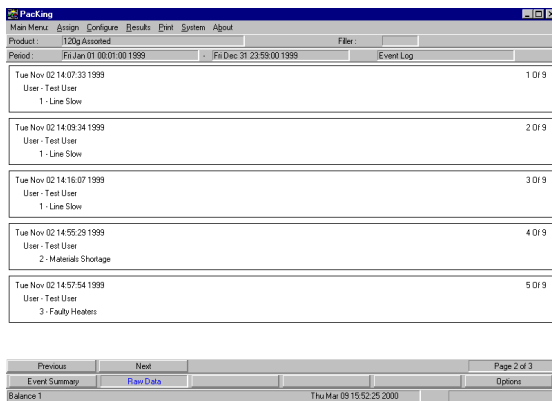

MCI Myrias software has been proved in over 15 years of practical application throughout British Industry. Installations in food, drink, chemicals and engineering plants have helped to reduce production costs, improve quality and provide records for regulatory requirements.

Optional additional **MCI Myrias** software modules include:

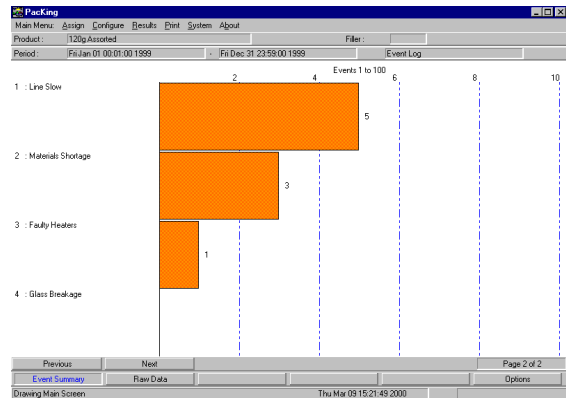

- MCI Myrias Quality** Module for quality attribute checking against AQL
