

Do you want better Stock Management?

MCI Myrias helps you keep control of your raw materials and finished product stocks

MCI Myrias is a modular system designed for real-time control of materials stocks, helping you minimise your stock-holding while heading-off the danger of running short at a critical moment. From managing supplier details and ordering raw materials, through receiving deliveries and warehousing, full details of materials movements are recorded and an intelligent watch kept on future needs. From transfer to warehouse stock and onwards to customer despatch, finished goods are controlled in a similar way. Levels of stock held in warehouse and in each department can be analysed quickly for value, traceability and other purposes.

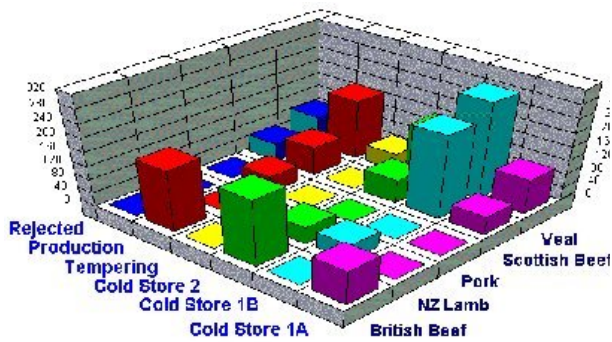

MCI Myrias runs on standard PC hardware, electronic weighing and measuring machines, Operator terminals, auto ID equipment, printers and data networks.

SCREEN DISPLAYS AND PRINTED REPORTS

- ◆ Full Lot and Batch traceability
- ◆ Data sorted by a comprehensive set of filters
- ◆ Stock quantities and values by location or supplier
- ◆ Dialogues between terminals and Management PCs
